

Enterprise AI & Azure AI Training — MCQs

1. What is the primary purpose of Azure AutoML?

- A. Creating React applications
- B. Automating machine learning model development
- C. Managing Blob Storage
- D. Creating SQL databases

Correct Answer: B

2. In enterprise AI architecture, what is the role of the backend (.NET/FastAPI)?

- A. Train LLMs
- B. Store operating systems
- C. Orchestrate API calls and business logic
- D. Replace Azure services

Correct Answer: C

3. What is the primary purpose of an application integration layer in enterprise AI systems?

- A. GPU manufacturing
- B. Coordinating frontend applications, business logic, and AI services
- C. Creating operating systems
- D. Managing physical servers only

Correct Answer: B

4. What is a REST endpoint?

- A. Backend application script
- B. Frontend framework
- C. Accessible API URL for applications
- D. Azure subscription type

Correct Answer: C

5. Which Azure service is commonly used to store PDFs, images, and audio files?

- A. Azure SQL
- B. Azure Blob Storage
- C. Azure DevOps
- D. Azure Functions

Correct Answer: B

6. What is the main purpose of Azure AI Document Intelligence?

- A. Hosting React apps
- B. OCR and document data extraction
- C. Virtual machine creation
- D. Neural network training only

Correct Answer: B

7. What is the difference between normal OCR and prebuilt invoice models?

- A. No difference
- B. Invoice model extracts structured business fields
- C. OCR works only for images
- D. Invoice model requires React

Correct Answer: B

8. Which of the following is an example of structured extraction?

- A. Random text generation
- B. Extracting Invoice Number and Total Amount
- C. Playing audio
- D. CSS rendering

Correct Answer: B

9. What does Azure AI Vision primarily do?

- A. Database replication
- B. Image analysis and captioning
- C. Audio compression
- D. ML model tuning

Correct Answer: B

10. Which Azure service converts speech into text?

- A. Azure SQL
- B. Azure AI Speech Service
- C. Azure Kubernetes Service
- D. Azure Monitor

Correct Answer: B

11. What is a common enterprise use case for Speech AI?

- A. CSS styling
- B. Meeting transcription
- C. Disk partitioning
- D. VPN configuration

Correct Answer: B

12. What is Azure OpenAI/Foundry primarily used for?

- A. VM provisioning
- B. Running LLMs through enterprise APIs
- C. Container networking
- D. Firewall management

Correct Answer: B

13. What does “temperature” control in an LLM?

- A. GPU heat
- B. Creativity/randomness of responses
- C. Storage size
- D. API authentication

Correct Answer: B

14. In enterprise AI systems, where is business-specific response filtering usually implemented?

- A. Frontend UI layer
- B. Backend application/business logic layer
- C. AI model training pipeline
- D. Database indexing layer

Correct Answer: B

15. What is the purpose of Frequency Penalty?

- A. Increase database speed
- B. Reduce repetitive responses
- C. Improve GPU cooling
- D. Create indexes

Correct Answer: B

16. What does a Stop Sequence do?

- A. Deletes the model
- B. Stops token generation at specific sequence
- C. Creates embedding
- D. Restarts Azure services

Correct Answer: B

17. What is Prompt Engineering?

- A. Designing virtual machines
- B. Configuring LLM behaviour through prompts
- C. SQL optimization
- D. Firewall creation

Correct Answer: B

18. Which of the following is an example of structured prompting?

- A. "Tell me something."
- B. "Return response in JSON format only."
- C. "Restart server."
- D. "Create subnet."

Correct Answer: B

19. What is the purpose of embeddings in GenAI?

- A. Compress videos
- B. Represent semantic meaning numerically
- C. Configure storage accounts
- D. Deploy React apps

Correct Answer: B

20. What does RAG stand for?

- A. Reactive API Gateway
- B. Retrieval-Augmented Generation
- C. Resource Access Governance
- D. Random AI Generator

Correct Answer: B
